EMPLOYMENT HISTORY

Virtual Gaming Worlds (VGW)
Senior IT Service Analyst
2023 - Present

Supported and managed a variety of SaaS platforms, including Okta, Google Workspace, Microsoft Office 365, VMware AirWatch/Workspace ONE, Microsoft Intune, NinjaOne, SentinelOne, Kolide, Proofpoint, Slack Enterprise, Cisco WebEx, Salesforce, Amazon Connect, Zendesk, Amazon Web Services (AWS), GitHub Enterprise Cloud, and 1Password, in addition to the Atlassian Cloud suite, including Confluence and Jira.

Provisioned access and configured software for VGW personnel, including conducting the IT induction and onboarding sessions, in addition to providing support to stakeholders and VIP executives, including troubleshooting and resolving software and hardware issues within SLA targets while assisting in IT system administration.

Ensured all systems were managed and compliant with the organization's Endpoint Protection Policy, including enrolling and managing devices in Apple Business Manager (ABM) and AirWatch/Intune Mobile Device Management (MDM) platforms.

Configured, supported, and maintained video conferencing hardware and software and installed audio and video equipment, including televisions, microphones, cameras, BGMS, and Google Meet compute systems for in-person and remote meetings, skill shares, workshops, and town halls.

Responsible for placing hardware orders while ensuring all assets were recorded and maintained in the Reftab IT Asset Management database, including updating asset records when the status or assignee of the device changes, in addition to scheduling technicians for on-site warranty hardware repairs.

Led the mobile carrier onboarding project for standardizing device purchases and monthly plans for users in North America, including managing billing, activating new lines, and porting existing phone numbers to the corporate account.

Managed access to enterprise services in line with the Identity Access Management (IAM) policy and procedures, including onboarding and offboarding users and systems, in addition to obtaining and validating permission authorizations, while ensuring all IAM activities were recorded in Jira Service Management, including evidence of appropriate approvals where required.

Produced and maintained internal documentation in the IT Services Knowledge Base and user-facing documentation in the IT Service Desk Knowledge Base in Confluence.

Developed new automation workflows and group rules in Okta to automatically provision and assign users to applications and groups based on their location, department, and role attributes within the organization.

Responsible for sourcing and onboarding new vendors in North America and ensuring all contracts and paperwork were reviewed, approved, and signed by all levels within the organization before implementation.

Conducted the planning, site survey, and network builds for the Toronto, Ontario and Boulder, Colorado offices, including assessing and incorporating providers for VoIP telephony and redundant failover dedicated fibre Internet services, installation of end-user hardware, including monitor arms, displays, docking stations, printers, and video conferencing equipment, in addition to installing patch panels, Ethernet, and fibre cabling across multiple floors.

Configured Fortinet networking hardware, including creating and managing dedicated VLANs, subnets, SSIDs, and security policies across all gateways, routers, switches, firewalls, and wireless access points.

Experienced in managing the Genetec Security Center SaaS platform for managing local employee access to the premises, including configuring access card readers, employee badges, and video cameras, in addition to providing monthly logs of cardholder activities to appropriate stakeholders.

Developed custom Bash shell scripts to automate manual processes, including backups, restorations, migrations, software installations, and new system configurations.

Responsible for managing the NinjaOne Remote Monitoring and Management (RMM) platform within the organization for system monitoring, patch management, remote Terminal access, onboarding scripts and applications for automating software installations and troubleshooting issues, in addition to creating standardized policies for managing client endpoints.

Assisted with configuring and migrating Mobile Device Management (MDM) solutions and end-user devices in North America from AirWatch to Intune.

Reviewed submitted cover letters and résumés and conducted interviews for new candidates who joined the IT team in North America.

Coinbase
IT Engineer
2021 - 2022

Responsible for administering a variety of SaaS enterprise application platforms, including Okta, Google Workspace, Jamf Pro, Duo, Slack Grid, LastPass, Confluence, and Jira.

Experienced with managing endpoints enrolled in the organization's Mobile Device Management (MDM), including endpoint detection and response, in addition to supporting cloud applications integrated with SSO, SAML, and MFA methods, including TOTP rolling codes, push authentication requests, and YubiKey hardware security keys.

Provided end-user support for macOS software and MacBook Pro hardware-related issues, including scheduling repairs with Apple Enterprise Support and supporting Chromebook devices with Chrome OS.

Supported and managed iOS and Android mobile devices, including procuring testing hardware for application development.

Created detailed documentation for supporting new applications and IT procedures while refining existing processes to increase efficiency.

Supported the product and operations teams and other stakeholders on technical matters.

TD Bank
IT Business Systems Analyst II
2019 - 2021

Responsible for managing and issuing origin enterprise Extended Validation SSL certificates using the Venafi PKI certificate and key management platform for new and existing microsites and applications.

Assisted with managing DNS zone file resource records for domain names hosted on the internal name servers, in addition to the external F5 BIG-IP GTM and domain registrar based on requests.

Communicated with third-party external vendors for deploying and renewing SSL certificates, in addition to transferring domain names between registrars.

Experienced working with ServiceNow, Jira, and Gemini for creating and managing ITSM ticket submissions.

Supported the Akamai to Verizon CDN and edge DNS migration projects for moving all production-level websites, applications, and services.

Assisted with the DMARC policy implementation project for preventing email spoofing.

Supported the DigiCert to Entrust certificate authority migration project for replacing all website and application SSL certificates hosted by third-party external vendors.

Developed process documentation and flowcharts in Confluence, including various PowerPoint presentations for project teams, and designed disaster recovery diagrams for large network implementations and migrations.

Measured website, CDN, and DNS performance metrics with trending analytic data using pivot tables and charts in Microsoft Excel for the SEO and WCM teams.

Co-facilitated training sessions for the Publishing, BTRM, and Branding teams.

Contributed to the semi-annual domain portfolio reviews, including assessing potential risk areas while providing future recommendations.
